

## Vembu BDR Suite for VMware vSphere and Microsoft Hyper-V

Vembu BDR Suite offers two specifically developed products with enterprise-level features to protect virtual environments - **Vembu Backup & Replication for VMware** and **Vembu Backup for Microsoft Hyper-V**. They provide agentless backup, replication, and recovery for VMs hosted in VMware vSphere & Microsoft Hyper-V environments with capabilities like near-continuous data protection, application consistency, instant boot and verified recoverability. Thus, Vembu delivers an RTO and RPO of <15 minutes for all virtualized applications and data ensuring high availability for businesses of any size.

**Improved Scalability**

**Faster Restores**

**Better Management**

### Customer Quotes

*"Vembu ensures availability of our core productions systems that support Mackie's business operations. 24x7 availability of business applications and its data is critical for us, and Vembu delivers on these requirements. Vembu has become an integral component of our IT and business continuity strategy."*

- Lee Wong, Manager of Information Technology at The Mackie Group

##### Management Server

vCenter Server 7.0, 6.7, 6.5, 6.0, 5.x, 4.x

##### Virtual Machines

All OSs supported by VMware

#### Microsoft Infrastructure

##### Platforms

Windows Server 2019, 2016, 2012 R2, 2012, 2008 R2

### Backup

**Agentless VMware & Hyper-V Backups:** Backup single or multiple VMs from your ESXi/ Hyper-V hosts and also from your vCenter/Hyper-V clusters without installing any agent inside each VM

**Near Continuous Data Protection:** Schedule backups as often as every 15 minutes for lesser RPO

**Incremental backups:** Only the blocks changed since the previous backup are backed up in the successive incremental

**Application-Aware backups:** Ensure consistent backups of VSS aware applications such as MS Exchange Server, MS SQL Server, MS SharePoint and Active Directory

**Advanced Retention Policies:** Retain multiple recovery points that span days and years as per your requirements

**Automated Backup Verification:** With the latest available recovery point, the backup data is automatically booted as a VM to verify its recoverability

**Backup level Encryption:** Vembu provides end-to-end encryption (AES 256 bit) and lets you encrypt the data at rest and in flight through customized password

### Replication

**Agentless VM Replication:** Replicate your VMware VMs from one ESXi host to another and get hold of your mission-critical VMs to stay periodically synced to the original

**Failover & Failback:** Instantly failover and failback the replica VM at the time of system crash or disaster to reduce business downtime

**Network Mapping & Re-IP Settings:** Automatically maps production host network and IP address with the DR host network to avoid manual labour during the failover of replicated VMs

## Hosts

Microsoft Windows Server 2016, 2012 R2, 2012 R2 Core, 2012, 2008 R2, 2008 R2 Core

## Virtual Machines

All OSs supported by Microsoft Hyper-V

## Monitoring & Management

### Vembu BDR 360

Centralized tool for monitoring that provides end-to-end visibility to all the backup jobs configured using the Vembu BDR Suite with features like:

- Email Alerts
- Instant Notifications
- Group Management
- Image Verification Reports

### Vembu Portal

It is an all-in-one portal to register & manage Vembu Products & Services with the options like:

- Billing
- Invoice
- Licensing
- Account Management

## Recovery

**Instant Boot VM:** Reduce the RTO by instantly booting your VMware/Hyper-V VM backup data as a VM on any hypervisor like VMware or Hyper-V or KVM

**Full VM Recovery:** Permanently restore the backed up data as a VM directly to the same or different hosts

**File Level Recovery:** Browse, search and instantly restore the required files and folders from the backup data

**Disk Mount:** Instantly access the backed up disks by mounting the backup data on the disk management of the local machine

**Cross-Hypervisor Migration:** Download the backup data into multiple virtual file formats like VHD, VHDX, VMDK, VMDK-FLAT & RAW and later use it to migrate the VMs across hypervisors

**Application Item-level Recovery:** Granularly browse and recover the individual application items of Microsoft Exchange, SharePoint, SQL and Active Directory

**Disk Level Recovery:** Restore backed up VMs at disk level to another VMs in an ESXi host

## Storage & Management

**Offsite Copy/DR:** Replicate a copy of your backup data from the onsite backup server to an offsite server of your own or to Vembu Cloud for Disaster Recovery

**Archive backups on Tapes:** Replicate a copy of your backup data to tape media for long-term archival

**Scale-out Repositories:** Storage targets such as DAS, SAN and NAS can be incrementally added to the repository anytime without affecting the existing backup jobs

**Efficient Storage Management:** Vembu uses its proprietary VembuHIVE file system on top of the storage targets to enhance performance and scalability of the storage targets. It has in-built Compression, Deduplication, Encryption, Version Control and Error Correction

**Email-Alerts:** Enable email notifications to get alerts about the status of the configured backups (like success, failure, missed, etc.)

**Group Management:** Combine backup jobs or hosts/VMs to create groups with multiple users for easier management.
