

# Simplifying Data Protection

## Replication to Cloud using Vembu CloudDR

Vembu offers a solid Disaster Recovery plan through its Cloud Services for the businesses who can't afford to setup an offsite infrastructure for disaster recovery. The backup data in onsite backup server storage is replicated to Vembu Cloud hosted in AWS. In case of any disaster, the backup data can be directly restored from the cloud without any complication. Thus, organizations will now be able to setup a robust, secure and cost-effective DR plan for their environment with Vembu CloudDR.

### Customer Quotes

*" Vembu ensures availability of our core productions systems that support Mackie's business operations. 24x7 availability of business applications and its data is critical for us, and Vembu delivers on these requirements. ### Vembu CloudDR Features

**Live Data Transfer:** Instantly after the completion of every successful backup in local backup server, the seamless Live Data transfer from local backup server to Vembu Cloud takes place

**Server Disaster Recovery:** The secondary copy of backup data stored in the Vembu Cloud provides the capability to rebuild the backup server effortlessly after any disaster event

**Restore Anywhere & Anytime:** Login to the Vembu CloudDR console from anywhere at anytime to instantly restore the backed up data from the Cloud

**Geographically Redundant:** Vembu CloudDR is available for Americas, EMEA and APAC regions wherein the user can store the backup server data in the local region or can store the data in any other region as they wish

**Advanced Security:** To protect against the online threats, the data is encrypted with Advanced Encryption Standard (AES-256 bit encryption)

**Bandwidth Throttling:** This feature allows you to throttle the speed of backup data transfer, which in-turn reduces the network traffic during peak time

**Retention policies:** Manage the full backup and incremental backups via retention configuration and retain any number of recovery points as per the requirement

**File Level Recovery:** Select and restore only the required files/folders instantly from the backup

**Download:** Download the backup image data into virtual file formats (VHDX, VHD, VMDK, VMDK-FLAT and IMG) and use it to perform cross-platform migration (P2V,V2V)
