Vembu NetworkBackup
Installation Guide - Windows
Vembu NetworkBackup Installation Guide - Windows

- Download NetworkBackup Client from this link - [NetworkBackup Client](#) Select the 'Vembu NetworkBackup Client' tab and click [NetworkBackup Client Windows MSI Installer](#). Moving the mouse over this option will display the supported versions.
- Run the downloaded installer to deploy the client agent in the machine
- The installer will check for the following prerequisite packages based on the OS type (32 bit or 64 bit) and will proceed to install them (if not installed previously)
  - Visual C++ 2008 redistributable packages x86
  - Visual C++ 2008 redistributable packages x64
  - Visual C++ 2013 redistributable packages x64
  - Visual C++ 2015 redistributable packages x86
  - Visual C++ 2017 redistributable packages x86
  - Visual C++ 2017 redistributable packages x64

- Once installation of prerequisites completes, you will be directed to Vembu NetworkBackup installation
- Click **Next** from the welcome window to begin installing NetworkBackup Client

![Welcome to the VembuNetworkBackup - Client Only Setup Wizard](#)

*The Setup Wizard will install VembuNetworkBackup on your computer.*

*It is recommended that you close all other applications before continuing.*

*Click Next to continue, or Cancel to exit the Setup.*

- Read the Vembu Software License Agreement carefully as it contains important information about your Rights, Restrictions, Obligations, Limitations, and Exclusions. Choose 'I accept the terms in the License Agreement' option and click **Next** to proceed with the installation.
Enter the NetworkBackup Client ID. By default, it will be your system name but it is recommended that you give your E-Mail ID, since it is globally unique. Click Next.

Choose the installation option you want to proceed with.
- Opting for Typical will automatically choose an optimized configuration for your install.
- Proceed with Custom if you want to change the default values. Select the required option and click Next to proceed further with the installation.
Note: We recommend choosing Typical as the installation option.

Proceeding with custom installation will lead to choosing the installation type. This will allow you to install NetworkBackup Client:
- As a Windows application
- As a Windows service

Description of what happens when NetworkBackup Client is installed as an application or as a service is explained in the image below.

Note: By default, Install as a Windows service will be selected
Proceeding further will let you configure logon account for Windows service. You can either:
- Log-on in Local System Account or
- Log-on as a specific user (usually a user with administrator privileges).

Proceed to configure the installation location. By default the installation location is set to 'C:\Program files'.
Click the *Browse* option to configure the installation location. Select the required location and click *OK*. Once done configuring the installation location, click *Next* to proceed further in the installation process.

**Note:** At least 500 MB of free disk space is needed for the installation to occur.

Configure the Web-Console User Name and Password. Provide the login credentials for Web-Console access which is set as admin/admin by default. Click *Next* to proceed installing NetworkBackup Client.
Once done configuring the required options, verify the details provided in the final window shown. Click **Install** to proceed with the installation.

At the final step, the NetworkBackup Client installation wizard asks whether to:
- Start Vembu NetworkBackup application and
- Open Vembu NetworkBackup Web Console.

You can leave the options selected and click **Finish** or start later.
